New Concepts

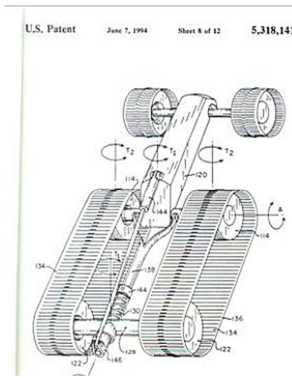

Ground Contact Suspension Drive Steering Frame Configuration

New technology

System of systems featuring flexible mechanical composites.

Based on high tension, superior traction, low-impact, fast all terrain tracks.

HISTORY

David W. Hansen

Certified A&P mechanic, pilot, Utah State
Radar Mechanic, Army NG
Weapons Mechanic, Air Force Reserve
Tool Engineering, General Dynamics, San Diego
Graduate Industrial Engineer, Cal Poly
Production Supt, Weyerhaeuser Co. WA
Application Engineer, Vickers Hydraulics, Chicago
Sales Engineer, Ross TRW, McGill Bearings, King Bearing, Pacific NW
President, Iguana Technology, Ground Vehicle R&D, 25 years.

I have worked with over 500 customers on mobile, aircraft and industrial engineering problems.

I have learned ratio & proportion, weight & balance and the subtle secrets required for all terrain ground vehicle mobility including highway, snow, sand, mud, turf, obstacles and water.

R&D is like climbing a mountain. You keep going and eventually reach the top. I qualified on the FCS Program to help bring the "best technology for the American Soldier." It was cancelled in 2009 but I kept going. I am looking for opportunities to apply my new concepts with compatible people.
